COMPETITIONS – Statistics 2011 - 2022

Key Facts

- Total number of competitions in 2022 has increased by **19.4%** compared to 2021.
- Pony and Indoor Arena competitions are not included.
- Intro Level has been added as Unified format
- The distribution between the competition formats remains relatively stable for 2022 with a slight increase of Unified format from 12.0% in 2021 to 13.1% in 2022 and a decrease of the Short Format from 59.2% in 2021 to 58.1% in 2022. Similarly to 2021, Long format competitions represent 28.8% of the sport although over 12 years there is a clear trend to Short Format competition.

FALLS– Statistics 2011 – 2022

Key Facts

- For 2022, the overall percentage of falls (5.43%) is higher than 2021 (4.98%), it is slightly higher than the 2011-2022 average of 5.37%.
- The number of falls on the flat (which include warm-up and Jumping falls) has increased passing from 22.96 % in 2021 to 27.73% in 2022. Better reporting may have contributed but it warrants attention.
- The average for the period is of 3.94 unseated athletes for every 100 starters (1 unseated athlete every 25 starters) and 1.43 horse falls for every 100 starters (1 horse fall every 70 starters).
- The distribution of falls per competition format shows an established trend with a higher percentage of falls in Long format with an average for the period of 4.95% for Short format and 6.40% for Long format.
- Figures for 2022 show that the 4.25% of unseated athletes is above the average of the period of 3.94%. Total horse falls at 1.18% are well below the average of the period of 1.43%.
- The percentage of horse falls remains below the average of the period. Both rotational and non rotational falls at XC fences remain at a low percentage.
- The percentage of rotational horse falls (higher risk of injuries for horse and athlete) has decreased from 0.20 horse fall every 100 starters (1 rotational horse fall every 510 starters) in 2011 to 0.07 rotational horse fall every 100 starters (1 rotational horse fall every 1431 starters) in 2022. **Rotational falls have constantly been decreasing since 2013 and have never reached at such a low average.**

INJURY – Statistics 2011 – 2022

Key Facts

- The numbers and statistics in this section need to be assessed with due care as the reporting on injuries has not always been consistent. The reporting of the type of injury sustained was originally left to the fence judge that could only base his judgment on a “first impression” which could often be misleading. An improved follow up procedure on injuries has been implemented as of 2010 in order to have more reliable information confirmed by the Chief Medical Officer and/or Veterinary Delegate on the exact injuries sustained by the athletes and horses.
- Therefore, figures have kept improving. As from 2019, the serious injury definition has been reviewed to “Serious injuries can be categorised as those that, in the opinion of the referring doctor, would require hospital admission for immediate treatment. Examples: major fractures (including all compound fractures, but excluding simple fractures of clavicle and wrist), crush injuries with suspicion of pneumothorax, ruptured spleen etc.”
- For 2022, 28 serious injuries were reported. Out of the 15 rotational falls in 2022, 27 % led to a serious injury (4 falls). This is a big focus to continue reducing.
- A total of 17 concussions were reported, 9 linked to a serious injury and 8 to a slight injury.

INJURY – Statistics 2011 – 2022

Key Facts

- In 2022, 87.0% of falls caused no injuries, 10.6% caused slight injuries and 2.4% led to serious injuries.
- Relating the risk of an injury to the number of fences jumped the average of the period shows a risk of 1 serious injury every 20,136 fences jumped.
- Nevertheless the average values for the period indicate 4.86% falls with no injury every 100 starters (1 fall with no injury every 21 starters), 0.35 % falls with slight injury every 100 starters (1 fall with slight injury every 282 starters), 0.15 % falls with serious injury every 100 starters (1 fall with serious injury every 671 starters) and a 0.0036 % fatal falls every 100 starters (1 fatal fall every 27,855 starters).
- The relative risk factors for the different types of falls show clearly that the risk of having a serious injury changes dramatically from the unseated athlete for whom, as an average of the period, the risk of having a serious injury is once every 71 falls, horse falls once in every 20 falls, to the rotational horse falls where the average risk of a serious injury is once every 6 falls.
